

Task 2.4_Requirements for future iterations

Issues addressed by test participants:

1. Remove top bar that appears in the navigation when clicking on “contact”.
2. On Work section, the width on heading background (design process and other information) is more. On larger screens, the heading width background is dominating the text and images.
3. Wanted Search field on home screen
4. Spelling check should be done in content on all the pages
5. By using of too many font styles, makes the screens little distracting for few users.
6. One of the test participant suggestion is to have a read more button on CSS animation as well to explain the animation in details.
7. Should check the spellings, Punctuation and capitalization on all screens.
8. ‘About’ link, could also be presented in normal body of the screen along with menu (mobile devices). Because it’s the main scenario. It can be displayed as a link or readable text.
9. On About page, under skills/tools section, user wanted some kind of info graphic (visual graphic elements) for the tools mentioned (Adobe XD graphic, Figma etc.)
10. Regarding contact section, user idea is to have current location of the candidate.
11. On smaller screens (mobile) it’s good to have only one background screen color.

Usability problems:

Participant 3

1. Participant was interested to know more about CSS Animation details, she is expecting “Read more” button will exists under CSS animation section just like on work section.

Rating: Usability rating: 3 (major usability problem)

Recommendation: Add ‘read more’ button and add all the desired information for css animation and link to the read more, so that user can see how the css animation is done etc.

Participant 2

2. Participant is going through all screens, and on larger screens, the orange background for h2 headings text on work section is dominating the images and information displayed.

Rating: Usability rating: 4

Recommendation: Reduce the padding for headings and change the color to match with background.

3. Participant was trying to read the content while going through all pages and found few spelling mistakes, and capitalization issues.

Rating: Usability rating: 2

Recommendation: Do spell check on contents, work with capitalization of words or sentences.

4. Participant clicked on contact link from hamburger menu and it takes the user to contact section, but the top navigation bar is not contract.

Rating: Usability rating: 3

Recommendation: contract the top bar navigation after clicking on contact from hamburger menu.

Participant 5

Participant was interested to know about the candidate current location, unfortunately couldn't able to find anywhere.

Rating: 2

Recommendation: Add current location of the candidate in contact section.

Participant 5

Participant landed on homescreen of website in mobile and distracted because too many colors used for various sections.

Rating: 3

Recommendation: For smaller screens, make the background color only one.

Final Thoughts:

I gained lot of valuable inputs, suggestions from test participants, it was a pleasure to communicate with the people across globally, enjoyed thoroughly.

The things which I did not noticed while designing the website were easily identified by the users and I laughed at myself by doing it so. Few things needs to be fixed and few I felt like can be fixed at later stages.
